

# The Bord na Móna EASi-System

An innovation in waste management

# The Revolutionary EASi-System

At Bord na Móna we are committed to providing the best waste management and resource recovery service possible, continually innovating to bring more sustainable waste management solutions to our partners. We are proud to introduce the EASi-System, an innovative new mini compactor which uses the patented EASi-Bag, the world's first operational recyclable polypropylene bag.

Designed and made in Ireland and underpinned by an unrivaled knowledge of solving waste issues in the Irish market the EASi-System is a cost effective and economical solution that can reduce your carbon footprint in excess of 94.55%. It results in a cleaner, smaller, neater and more sustainable waste environment compared to regular compactors or bin collection services.

## Space Saving

Small but mighty the compact EASi-System system can fit in the tightest of places, making it ideal for locations with no commercial value.

Savings can also be achieved as the maintenance, labour and upkeep costs associated with multiple waste rooms is removed and allows areas to be used for more commercial enterprise.

# Endless Benefits

## Reduced Frequency

The EASi-Bag's large capacity dramatically reduces your collection frequency. General Waste & Dry Mixed Recycling bags can be collected at the one time, avoiding the need for multiple collections.

## Ease of Collections

On-site collections are quicker and can be tailored to your needs. This reduces the collection time spent on-site and the labour costs that are traditionally associated with the manual transportation of waste.

# Cleaner Waste Environment

The EASi-Bag is designed to store large amounts of waste and is available in both 2 and 3 cubic metre bag sizes.

Their substantial size ensures that waste can be neatly stored in discrete areas, removing the need for multiple bins on site or odour offensive bin trucks.

This feature helps avoid disruption or a site appearing aesthetically displeasing to its residents.

# Ease of Installation

The EASi-System is very easy to install and is standard single-phase. The daily power required is less than the energy used to boil a kettle and cuts out the cost of expensive cabling.

The hydrophobic bag contains smells and prevents spillages usually associated with bins, making the EASi-System the most hygienic way to manage commercial waste.

# As EASi as 1 - 2 - 3!

Fully automated and designed for safety and ease of use.

## 01.

Pull the handle toward you and lift upwards.

## 02.

Place your bag of waste in the compactor.

## 03.

Simply close the lid.

# Make an enquiry about the EASi-System

At Bord na Móna we are committed to providing the best waste management and resource recovery service possible, continually innovating to bring more sustainable waste management solutions to our commercial partners.

The **EASi-System** is the ideal solution for offices, apartments, light industry, hospitals, colleges and large campuses, retail and shopping centers and multi-tenanted buildings.

Contact us for more information on how Bord na Móna's innovative EASi-System can transform your waste management.
